1 What's in the Package

- Device Adapter
- Video Base
- Display Adapter
- PC Adapter
- Getting Started Guide
- Software CD
- Power Supply Unit
2 Positioning the Display Adapter

The Wireless USB Display Adapter is designed for two possible mounting options:

- Simple table placement – the Video Base is placed on a flat horizontal surface, and the Device Adapter is connected at 90 degrees to the base so that it is vertical.

- Vertical mounting – the Video Base is fastened to a wall, a projector, or behind a display screen, and the Device Adapter is connected so that it is flat with the mounting surface, with the Device Adapter pointing upwards.

Note: For best performance, it is recommended to always position the Device Adapter vertically so that it is pointing upwards.
2.1 Positioning the PC Adapter

To achieve best performance it is recommended to position the PC Adapter in the upright position.

![Figure 1: PC in working mode - PC Adapter in upright position](image1)

When the laptop is not in use, the PC Adapter can be rotated 90 degrees for storage, as seen in the following illustration:

![Figure 2: Laptop inactive - PC adapter in horizontal position for storage.](image2)
3 Software Installation and First Connection

**Note:** If your PC contains a previous Wireless USB Suite driver installation, please perform a proper uninstall procedure using the Windows **Control Panel**.

1. Ensure that the PC Adapter is unplugged from the PC.
2. Insert the installation CD in the PC CDROM drive.
3. The installation CD auto-play menu is displayed.

![Installation CD auto-play menu]

4. Select **Install Wireless USB Software**.

![Installer options]

The installer offers two options:

- **Option 1: Install Directly from CD** - initiates the installation process from the CD.
- **Option 2: Download latest software from the WEB** - provides a link to a web address where you can download software updates. If you choose this option, follow the instructions provided on the software download page.

5. If you select **Option 1: Install Directly from CD**, the install wizard begins installing the Wireless USB software. The installation process may include more than one stage to
accommodate different drivers that are installed. Following the Wireless USB drivers, the Display drivers and application are installed.

6. Choose your geographic region to comply with your local radio regulations. This setting can be changed if needed once the software is installed.

7. Follow the onscreen instructions, and proceed by clicking Next> when prompted, or by approving authorization requests to continue the installation.
8. When the Wireless USB Driver installation has completed, the Display driver installation begins. Click **I Accept** to approve the end-user license agreement and continue installation.

9. When the installation procedure has successfully finished, you are automatically returned to the opening screen of the Auto-play menu.
3.1 Connect the PC Adapter to the PC

- Connect the Wireless USB PC Adapter to a high speed PC USB port. The system will automatically detect and install the drivers for the connected PC Adapter.

![VISTA] ![XP]

- System Tray icon turns red to indicate that the PC Adapter (Host) is ready to connect to any paired device in range.

![VISTA] ![XP]

3.2 Connect the Display Adapter

1. Attach the Display Adapter to the remote display device (TV/Projector/Monitor) and ensure the PC (with PC Adapter attached) is within 3 meter distance from the Display Adapter for the initial connection. Ensure the two adapters have clear line-of-sight. Connect the 5VDC power supply to the Video Base power receptacle.

**Note:** The PC Adapter and Device Adapter in this set are already paired and do not require performing a pairing procedure. If you should need to perform pairing manually for any reason (e.g. connecting to a new host PC Adapter, or adding a Device Adapter that was not purchased in a set), please refer to Appendix B: Pairing Procedure.

![VISTA] ![XP]

2. Wait for the System Tray icon to turn green, indicating that a wireless connection with the Display Adapter has been established. The Display icon is also displayed as soon as a connection is established and the Display drivers are active.

![VISTA] ![XP]

**Note:** If you do not see the icon changing to green, or do not see the Display icon, please see Appendix A: Troubleshooting Help for suggestions.
4 Wireless USB Manager User Interface

The Wireless USB Manager is the main user interface which allows you to monitor and control the available Wireless USB devices and connections that are within range of the PC.

4.1 Wireless USB Manager System Tray Icon

The Wireless USB Manager icon is automatically displayed in the Windows System Tray whenever Windows starts. The color and shape of the icon indicates the current activity state, as described in the following table:

<table>
<thead>
<tr>
<th>Icon Color</th>
<th>Status</th>
</tr>
</thead>
</table>
| ![Connected (green icon)](image)  | **Connected (green icon)**  
A wireless connection is established with a Wireless USB Device Adapter. |

Wireless USB PC Adapter is connected to the PC (PC Adapter is enabled), but no wireless connection is detected. |
| ![Host Hardware Disconnected (gray icon)](image) | **Host Hardware Disconnected (gray icon)**  
Wireless USB PC Adapter is not connected. |
| ![Host Hardware Disabled (gray icon with X)](image) | **Host Hardware Disabled (gray icon with X)**  
Wireless USB PC Adapter is disabled.  
*Note:* Under the Japan regional setting, this icon is displayed whenever the AC power source is disconnected from the PC. |
| ![Wireless USB Channel is Busy (green icon with exclamation)](image) | **Wireless USB Channel is Busy (green icon with exclamation)**  
Low channel quality detected, but at least one Wireless USB device is still connected. To improve connection quality, see Appendix A: Troubleshooting Help for suggestions. |
| ![Wireless USB Channel is not available (red icon with exclamation)](image) | **Wireless USB Channel is not available (red icon with exclamation)**  
No available channel detected. To improve connection quality, see Appendix A: Troubleshooting Help for suggestions. |

4.2 Accessing the Wireless USB Manager

To access the Wireless USB Manager:

- Right click the Wireless USB Manager System Tray icon and select **Wireless USB Connections** to display the **Wireless USB Manager** screen.

![Figure 3: System Tray Icon - Context menu](image)

4.3 Blocking or Disassociating a Device

The Wireless USB Manager screen allows you to remove devices or to temporarily disable them from connecting to the Host.

**To Block a device temporarily, and prevent it from connecting to the Host:**

- Right click the device name in the Connection list and select **Block Device**.

**To remove a device from the list of available devices completely:**

- Right click the device name in the Connection list and select **Disassociate Device**

**Note:** The **Disassociate Device** option is only available for Device Adapters that are purchased separately and not in a set. For information about Pairing an Adapter set, see Appendix B: Pairing Procedure.

---

**Figure 5:** Wireless USB Manager context menu

</table>
4.4 Changing Device Names in the Wireless USB Manager

The Wireless USB Manager screen allows you to modify the name of the device that appears in the connections list.

To modify the device name:
1. Double-click the device name
2. Enter the text that you want.
3. Click anywhere outside of the device name area to finalize.

![Figure 7: Editing Device Name in Wireless USB Manager]

4.5 Advanced Settings

The **Advanced Settings** screen of the Wireless USB Manager allows viewing advanced settings, and allows configuration of the Channel and Region selection in the Host.

To access the **Advanced Settings** screen:

- In the Wireless USB Manager screen, click **Advanced Settings**

![Figure 8: Advanced Settings screen]
<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>

</tr>
<tr>
<td>Apply</td>
<td>Applies the configuration changes that were made</td>
</tr>
<tr>
<td>Close</td>
<td>Closes the Advanced Settings screen</td>
</tr>
</tbody>
</table>

**Notes:** * This is the default value for USA region.  
# This is the only available option for Europe, Japan, Korea and China regions.
5 Using and Configuring the Display Adapter

The following are suggested work modes for connecting a display screen to the Display Adapter:

- Mirror Mode
- Extend Mode
- Laptop with Lid Closed
- External Display Only

**Note:** The display properties for the Display Adapter can be configured in two ways: as described in Sec. 5.2 Configuring the Display via the Display Icon Context Menu, or as described in Sec. 5.3 Configuring the Display via Windows Display Properties.

When changing settings, or during first connection between the PC Adapter and Display Adapter, the PC display may flicker or turn on and off as the screen resolution is automatically adjusted.

5.1 Using the Display Adapter

Upon first time operation, the Display Adapter is in Extend mode, this section (Sec. 5.1) describes the different modes that can be set.

In Sec. 5.2 and 5.3 you will find the procedures for configuring these modes.

5.1.1 Using Mirror Mode

Mirror mode is used to display the identical content on the additional screen as is shown on the main PC/Laptop screen. Mirror mode is generally used to display the PC contents on a larger or higher definition display. See Figure 9: Mirror Mode - displaying PC desktop on a larger display screen.

**Note:** Mirror mode is not recommended for playing HD video.
5.1.2 Using Extend Mode

Use the **Extend** mode to display different content on each display screen. In **Extend** mode, the display attached to the Display Adapter becomes an extended part of the Windows desktop. The extra desktop area is a great productivity aid, allowing you to view or work with more applications or documents at the same time. You can also use this mode to extend your desktop to fill multiple screens that are positioned next to each other for a larger continuous work space.

![Illustration of extend mode](image)

**Note:** Extend mode is recommended for playing HD video.

5.1.3 Laptop Operation with the Lid Closed

You can work conveniently with a laptop by setting its default action upon closing the lid to "**Do nothing**" (to prevent the laptop from entering "sleep" or "hibernation" mode, [Control Panel > Power Options, "When I close the lid:" - "Do nothing"](#)), and then set the Display Adapter screen as the primary display while disabling the main screen (see Sec. 5.3.5 Setting the Display Adapter as the Primary Display).

The laptop lid can then be closed, and the laptop can be used with the Display Adapter screen and an external keyboard and mouse attached to the laptop. This configuration can be used together with either Mirror mode or Extend mode.

5.1.4 External Display Only

When you want to use the external display only, (see Sec. 5.3.5 Setting the Display Adapter as the Primary Display), you can close your main monitor and view movies on the external display attached to the Display Adapter.
### 5.2 Configuring the Display via the Display Icon Context Menu

When a link is established with the Wireless USB Display Adapter, the Display drivers are activated and the Display icon appears in the Windows system tray.

The right-click context menu of the Display icon contains configuration options that correspond to the display mode.

**Note:** When changing settings, the PC display may flicker or turn on and off as the screen resolution is automatically adjusted.

<table>

<td>Sets the Mirror mode</td>
<td></td>
</tr>
<tr>
<td><strong>Off</strong></td>
<td>Disables the remote display</td>
<td>Select Mirror or Extend mode to enable the display</td>
</tr>
</tbody>
</table>
### 5.2.1 Setting Mirror Mode

To set the display to **Mirror** mode:

- Right click the DisplayLink System Tray icon and select **Mirror** from the context menu.

The resolution, color depth and refresh rate of the primary screen are duplicated on the display connected to the Display Adapter.

- If the display connected to the Display Adapter supports a lower resolution than the primary display, the primary graphics device will have its resolution changed automatically to ensure the whole picture fits on the additional display screen.

- If the display screen connected to the Display Adapter is larger than the primary screen, the image will be adjusted to a letter-box frame to preserve the correct aspect ratio.

**Note:** When changing from Extend to Mirror mode, it is recommended to first set the Display to Off, and then set to Mirror.

### 5.2.2 Setting Extend Mode

To set the display to **Extend** mode:

- Right click the DisplayLink System Tray icon and select **Extend** from the context menu.

You can also select the **Extend To** option to specify which side of the extended space is occupied by the extended display.
Note: When changing from Mirror to Extend mode, it is recommended to first set the Display to Off, and then set to Extend.

To place an application window in the extended space, use the following tips:

- Reduce the application window size to about half the normal size, and then drag the application window (dragging by the Title Bar at the top of the screen) past the edge of your main display and into the extended display space. Resize the window in the extended space as needed for comfortable viewing.

- When dragging a running process window such as a movie or other application from the main screen to the extended screen, it is recommended to pause or stop the running application first, and restart it in the extended screen.
5.3 Configuring the Display via Windows Display Properties

Display settings can also be configured from the **Windows Display Properties** dialog box. (In Windows Vista: right click on the desktop, select **Personalize > Display Settings**. In Windows XP: right click on the desktop, select **Properties>Settings** tab).

![Windows Display Settings](image)

**Figure 12: Windows Display Settings**

5.3.1 Selecting the Correct Display Monitor

In the monitor drop down box, find the entry for the Display Adapter display monitor "...on **DisplayLink Graphics**". You can arrange this display's position with respect to the other monitors on the extended desktop by using the drag area at the top of the Windows Display Settings dialog. If you are not sure which number represents which display, click **Identify Monitors** and a large identifying number will appear on each display.

5.3.2 Setting the Display to Extend or Mirror Mode

To set the display in Extend mode, check the option **Extend the desktop onto this monitor**
To set the display into Mirror mode, uncheck the box marked **Extend the desktop onto this monitor** (see circle #1 in Figure 12).
5.3.3 Adjusting Screen Resolution

Use the **Resolution** slider to adjust the desired resolution of the display (see circle #2 in Figure 12).

5.3.4 Adjusting Color Level

Use the **Colors** drop-down box to select a color complexity level (see circle #2 in Figure 12).

5.3.5 Setting the Display Adapter as the Primary Display

To make the Display Adapter display the primary display:

4. Select the screen that is connected to the Display Adapter - for example "**Default Monitor on DisplayLink Graphics Adapter**" as shown in the screen above.
5. Check the option **Extend the desktop onto this monitor**.  
   (In Windows XP - **Extend my Windows desktop onto this monitor**).
6. Check the option **This is my main monitor**.  
   (in Windows XP - **Use this device as the primary monitor**).
7. Click **OK** to save the new settings.

**Note:** On some PCs it is necessary to disable the main display (uncheck the box marked ‘Extend the desktop onto this monitor’ for the main display) as part of the same settings change.

The Display Adapter remains the primary one if the PC enters Hibernate or Suspend mode or is rebooted. If the Display Adapter is detached, the main display becomes the primary display again.
5.4 Optimizing Wireless Video Display

The following are suggested operating modes for best results in displaying video with the Wireless USB Display Adapter. Additional suggestions can be found in Appendix A: Troubleshooting Help.

5.4.1 Optimizing Internet Video Viewing

Many video content websites use an embedded Adobe Flash player to show video content. In some cases to achieve best performance with the Flash player, (for example, when viewing online video content in full screen mode) adjust the Flash Player settings as follows.

To **optimize the Flash player for the Display Adapter**:

1. Right click the video content on the website and select *Settings* from the Adobe Flash Player context menu.

   ![Flash Player Settings](image1)

2. In the **Adobe Flash Player Settings** screen, uncheck the *Enable hardware acceleration* option and click Close to close the settings screen.

   ![Enable Hardware Acceleration](image2)

3. Resume viewing the video content.
5.4.2 Setting Aero Desktop Theme in Vista

For best performance when using the Wireless Display Adapter with Windows Vista operating platform, it is recommended to use the **Aero** desktop theme.

**To set the Vista desktop to the Aero theme:**

4. Right click the desktop and select Personalize.

5. In the *Control Panel > Personalization* screen, select *Windows Color and Appearance*.

6. Select **Windows Aero** from the *Color scheme list*, click **OK** to save the new setting.
5.4.3 Recommended Media Player Applications

On Vista WDDM Aero and Windows XP (in Extend mode), the Display Adapter can display media files and DVDs using the following media players:

- WinDVD 8 ([www.intervideo.com](http://www.intervideo.com))
- PowerDVD 7 ([www.cyberlink.com](http://www.cyberlink.com))
- RealPlayer 11 ([www.real.com](http://www.real.com))

**Note:** To get a better idea of what you can do with the Display Adapter and multiple display screens, please see the web page "How it Works" at this address: [http://www.displaylink.com/how_it_works.html](http://www.displaylink.com/how_it_works.html)

5.4.4 Recommended Minimum System Requirements

For best performance, the following are the recommended minimum system requirements:

- Personal computer with USB 2.0 port available
- Microsoft Windows® XP SP3, or Microsoft Windows Vista SP1 (32 or 64 bit)
- TV/display/projector with VGA or HDMI port
- At least 1.2GHz Single Core CPU (1.8GHz Single Core or 1.6GHz Dual Core recommended)
- 512MB RAM memory minimum (1GB RAM memory recommended)
6 LED Indications

The following LED indications allow you to see the operational status of the Wireless USB adapters.

- **Power**:  
  - OFF when no power is applied or adapter is not connected  
  - Momentary green when initially connected to USB port.

- **Traffic** — Rapid flashing when data is received.

![Power/Traffic LED](image)

Pairing with multiple Hosts present – each pairing must correspond to a specific PC Adapter (Host) | If more than a single PC Adapter (Host) has been attached to the PC at any time, the pairing process requires that at least one PC Adapter be connected while the Device Adapter is being paired | Ensure that a single PC Adapter is attached to the PC, and then re-attach the Device Adapter to perform Pairing |
Appendix B: Pairing Procedure

The PC Adapter and Device Adapter in this set are already paired and do not require performing a pairing procedure. If you should need to perform pairing manually for any reason (e.g. connecting to a new host PC Adapter, or adding a Device Adapter that was not purchased in a set), please follow these steps:

To perform Pairing:

1. Ensure that a Wireless USB Host or PC Adapter is connected to the PC.

2. Remove the Device Adapter from the Video Base and connect it directly to the host PC USB port, do not use the Video Base or any other accessory to connect to the PC.

3. Upon first time connection of a Device Adapter to the PC, the Pairing driver is installed automatically.

4. Once the Pairing driver is installed, pairing is automatically performed between the host PC and the Device Adapter, and the following confirmation message is displayed:
5. Click OK to confirm and close the Cable Pairing screen.
6. Remove the Device Adapter from the PC and reconnect it to the Video Base.
